

iMPACK 1.0

Semi-automatic blistering machine

IMEL presents its semi-automatic mono-station blistering machine for R&D laboratories.

The thought studied for IMPACK 1.0 allows to produce one blister from pre-cut foils with just one machine.

What makes this machine so efficient is its lightness and compactness, which allows the operator to position it freely.

IMEL wanted to create a user-friendly machine. The touchscreen help and communicate clearly with the operator during the working phases.

SIMPLE AND COMPACT

SIMPLE

IMPACT 1.0 is a simple machine thanks to the recipe book which keeps in memory the parameter used, and also thanks to the rapid moulds change.

COMPACT

IMPACT 1.0 is a mono-station machine which allows the production of blister from pre-cut foils. It is a compact, light but sturdy machine that can be easily positioned.

SAFE

The safety is guaranteed by the machine design, thought and studied to be closed off to the access during the working process.
